

# Puchkov Kyryll

+41 76 230 22 89 | puchkov.k@phystech.edu | Moscow, Russia | Oct 17, 2000 | github:puchkovki

---

## Qualifications summary:

- Programming languages : Scala, Golang, C++, C, Python, SQL
- Development tools: Git, CMake, Make, Travis CI, Docker, Vagrant
- Distributed systems, multithreading, software engineering, automated testing, product delivery, design thinking, architecture strategy
- Skills: linear algebra, discrete mathematics, algorithms, computational maths, probability theory, optimisation
- Languages: English (fluent), German (pre-intermediate)

## Education:

2017 — 2021	Moscow Institute of Physics and Technology (GPA: 4.87/5) Department of applied and theoretical informatics (Acronis company)	Bachelor degree Honours degree
2021 — now	Moscow Institute of Physics and Technology Department of financial technology in business (Tinkoff company)	Master degree
2021 — now	Schaffhausen Institute of Technology	Master degree

## Job experience:

2021 — now	«Tinkoff, SME» <b>Junior Backend developer</b> <ul style="list-style-type: none"><li>• Support, scaling and reliability development of services for small and medium enterprises</li></ul>
2020 — 2021	«Acronis» <b>Research intern</b> <ul style="list-style-type: none"><li>• Research on the garbage collection in bitmap-based search engines</li></ul>

## Projects:

2021	<b>Garbage collector in search engines, based on bitmap-indexes</b> <a href="https://github.com/puchkovki/bachelor-thesis">https://github.com/puchkovki/bachelor-thesis</a> <ul style="list-style-type: none"><li>• Developed an effective garbage collection algorithm, tested and compared with other algorithms</li><li>• Backend is written fully in Golang</li></ul>
------	--

## 2021 | **Model of a distributed system**

<https://github.com/puchkovki/distr-model>

- Implementation of an infrastructure that allows to create models of distributed processes
- Requirements:
  1. Modeling of distributed processes that exchange messages
  2. Simulation of synchronous and asynchronous operation mode
  3. Simulation of message loss
- Backend is written fully in Golang

## 2020 | **Telegram bot for the campus domestic issues**

[https://github.com/kichyr/domestic\\_issues](https://github.com/kichyr/domestic_issues)

- This bot should simplify the applications' filling process for the domestic issues in the MIPT campus
- Backend is written fully in Python, using the Google Tables. Frontend is using JavaScript to interact with users.

## 2019 | **Website for programming contests (Judex)**

<https://github.com/trmigor/Judex>

- Judex is a system for automatic testing for student contests
- Backend is written fully in Golang, using the standard libraries and MongoDB Server. Frontend is using JavaScript to interact with users

## 2018 | **Command-line interpreter (Microshell)**

<https://github.com/puchkovki/Microsha>

- Microshell provides most of commands, contained in bash
- Syntax is the same as in other implementations of UNIX shell, with regular expressions, pipes, input-output redirection and standard notation available. Microshell interacts with operating system by a set of UNIX system calls and supports signals and multiprocessing.
- Backend is written fully in C++
